PROFESSIONAL SUMMARY

Computer Science undergraduate specializing in Artificial Intelligence and Data Science with Learning and getting experience in quantitative analysis, financial risk modeling, statistical modeling, and data-driven research. Built and evaluated predictive models on 150,000+ credit-risk records and 284,807 transaction records, translating analytical findings into risk scores, customer segments, fraud signals, and decision frameworks. Strong foundation in statistics, data interpretation, and rigorous analytical problem-solving. Seeking to apply quantitative research and analytical skills to Global Investment Research.

TECHNICAL SKILLS

Programming & Data: Python, SQL, C, C++, Pandas, NumPy, Matplotlib, Seaborn

Quantitative & Financial Analytics: Quantitative modeling, financial risk analytics, statistical analysis, data interpretation, feature engineering, model evaluation & validation, risk scoring frameworks

Machine Learning: scikit-learn, Logistic Regression, Random Forest, K-Means clustering, StandardScaler, classification, anomaly detection

Tools: Git, GitHub, Flask, FastAPI, REST APIs, VS Code, Kaggle datasets

RELEVANT ANALYTICAL EXPERIENCE (PROJECTS)

FinanSafe — Financial Risk Analytics & Decision Support System | Personal Project | 2025–2026

- Designed and deployed an end-to-end quantitative analytics platform integrating credit-default prediction, customer segmentation, fraud detection, and behavioral risk scoring to support data-driven underwriting and decision analysis.
- Built a credit-default prediction model on 150,000+ records using 10 financial features; achieved ROC-AUC of 0.82 for 2-year default probability estimation, supporting quantitative risk assessment.
- Applied K-Means clustering to segment customers into five behavioral-financial profiles (silhouette score 0.55), enabling comparative analysis for underwriting and portfolio insights.
- Developed a fraud-detection model on 284,807 real credit-card transactions; achieved ROC-AUC 0.99 and 85% fraud recall after feature standardization and rigorous model evaluation.
- Constructed a weighted quantitative risk framework using eight financial signals to generate 0–100 risk scores and deterministic APPROVED / REVIEW / REJECTED recommendations with transparent reason codes.

QuantumLearn AI — Full-Stack Analytical Learning Platform | Personal Project | 2026

- Built a production-oriented full-stack platform (Next.js, TypeScript, Supabase, Gemini) supporting structured learning, interactive simulation, progress tracking, and AI-assisted analytical guidance with authentication and API security.
- Implemented quantum-circuit simulation (1–5 qubits) and visualization components while applying rigorous software engineering practices for reliability and data integrity.

EDUCATION

Bachelor of Technology — Computer Science & Engineering | IIIT Senapati, Manipur | Expected 2028

Specialization: Artificial Intelligence and Data Science

Relevant Coursework: Statistics & Probability, Database Management Systems, Data Structures & Algorithms, Discrete Mathematics, Artificial Intelligence, Operating Systems, Object-Oriented Programming, Computer Architecture, Computer Networking, Data Science

ADDITIONAL INFORMATION

- Quantitative research skills: applied classification, clustering, anomaly/fraud detection, financial risk scoring, feature engineering, and model validation to large-scale financial datasets.
- Strong analytical foundation in statistical modeling, data interpretation, and translating quantitative outputs into structured decision rules and research insights.
- Maintained documented, version-controlled public GitHub projects demonstrating reproducible analytical workflows and production-oriented development practices.
